

PolaTape™

Superinsulation Installation Product

PolaTape™ is a polyester based reflective **tape** commonly used in the construction and installation of cryogenic insulation systems. Available in a variety of standard lengths, PolaTape™ is ideal for patching, installation, and construction on various spacecraft instruments, as well as other Pola and SpaceWrap™ products.

- Thin and flexible polyester film allows the tape to conform to tight contours, while pressure sensitive adhesive helps provide a reliable bond.
- Provides first surface optical properties similar to the other Pola and SpaceWrap™ products, making it ideal for use in their installation.
- PolaTape™ is provided in a standard roll length of 108 linear feet and a width of 1 inch. Additional lengths and widths are available by special order.

Item Number	Tape Width (Inches)
PT001-100-108	1
PT001-200-108	2
PT001-300-108	3
PT001-400-108	4
